

## **Silect Software Breaks New Ground in Management Pack Development and Management with Its New Release of MP Studio v4.0**

### **New Management Pack Development Center and Workflow Automation Capabilities Further Simplify System Center Operations Manager Deployment and Management**

**OTTAWA, ON — June 30, 2009 —Silect Software, Inc.**, a leading provider of deployment and management solutions for Microsoft System Center environments, today announced general availability of its latest release, MP Studio for Operations Manager v4.0. The extensive new MP authoring and workflow automation capabilities allow users to realize significant time savings and further extend the return on investment in the deployment and management of System Center Operations Manager.

The new Management Pack Development Center for MP Studio has been created specifically for IT Professionals who wish to create and manage MPs for line-of-business applications. MP Studio's wizard-driven operation simplifies the creation of each required component and utilizes best practices knowledge to pre-populate many configuration items. It also eliminates the need for development skills such as advanced XML authoring. New MP's can then be easily saved to the management pack store for version control and auditing.

MP Studio's new Workflow Automation allows an IT administrator to create a work order, then take advantage of best practices with automated guidance to complete the project involved. Administrators will save valuable hours by delegating MP ownership to applications specialists, knowing that the course of action they have defined will be followed exactly, and ensuring repeatable processes based on ITIL/MOF best practices and Silect's industry-leading MP Lifecycle Management methodology.

"We are extremely excited about the value this latest release of MP Studio brings for our customers," said Randy Roffey, Director of Product Management, Silect Software, Inc. "Using the new MP creation capabilities of the MP Studio v4.0's new Development Center, users can now author management packs for System Center Operations Manager in hours or days what might have taken them weeks to complete using other tools or manual XML coding methods. And MP Studio's new workflow automation capabilities further enhance our user's ability to efficiently and reliably manage Operations Manager MPs throughout the lifecycle."

Full product details of Silect's MP Studio v4.0 and a brief demonstration of each of the new features can be found at <http://www.silect.com/products/MPStudiov4.aspx>.

**About Silect Software Inc.**

Silect Software is a leading provider of deployment and management solutions for Microsoft System Center Operations Manager and Configuration Manager/DCM environments. Silect's industry-leading solutions, MP Studio and CP Studio, simplify each phase of the Management Pack and Configuration Pack lifecycle—from architectural planning, development, migration and deployment through production management—with features to automate processes based on MOF and ITIL best practices.
